Contoh abnormalitas perkembangan serbuk sari

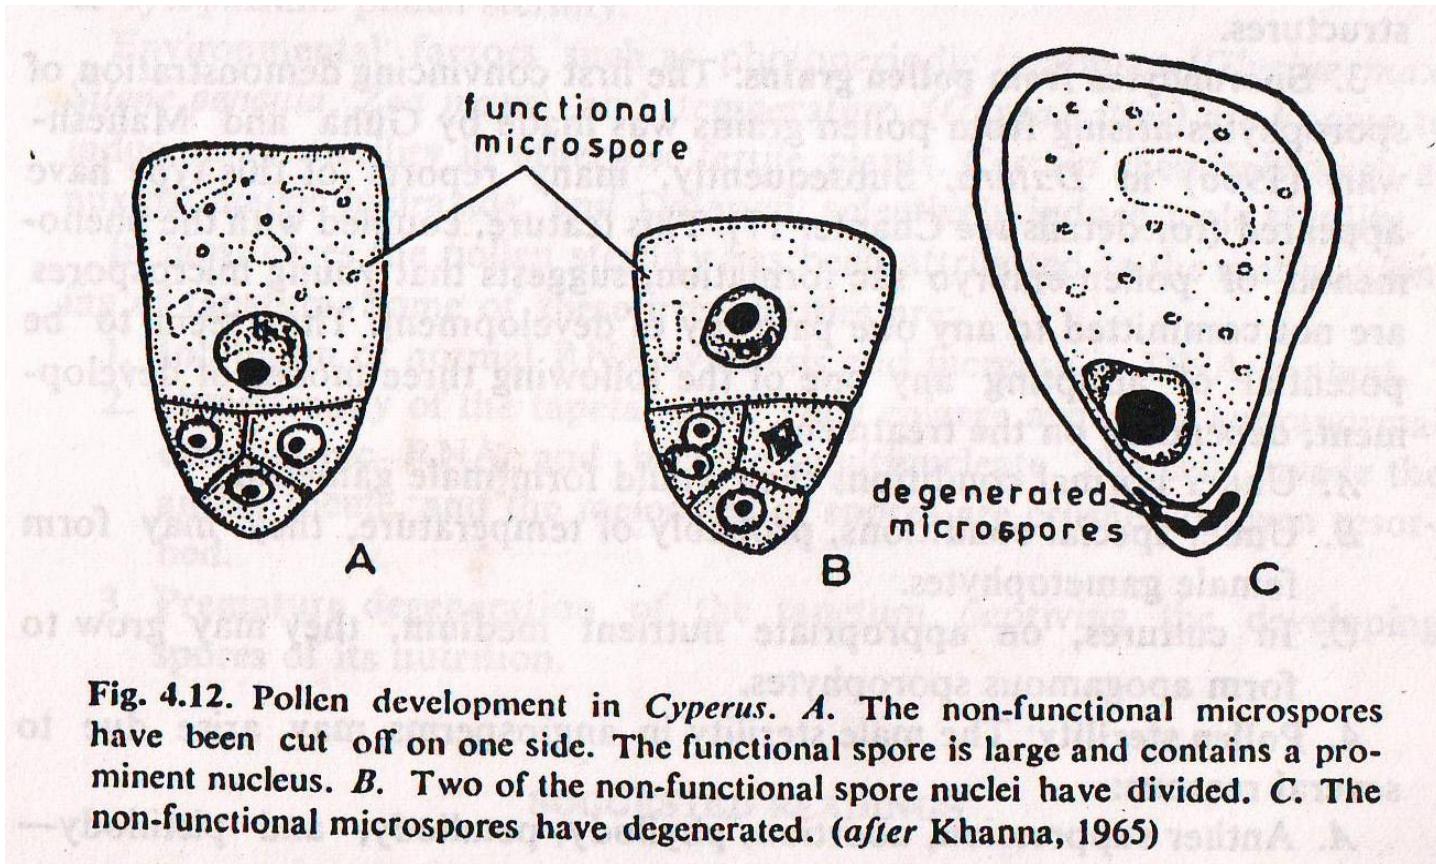

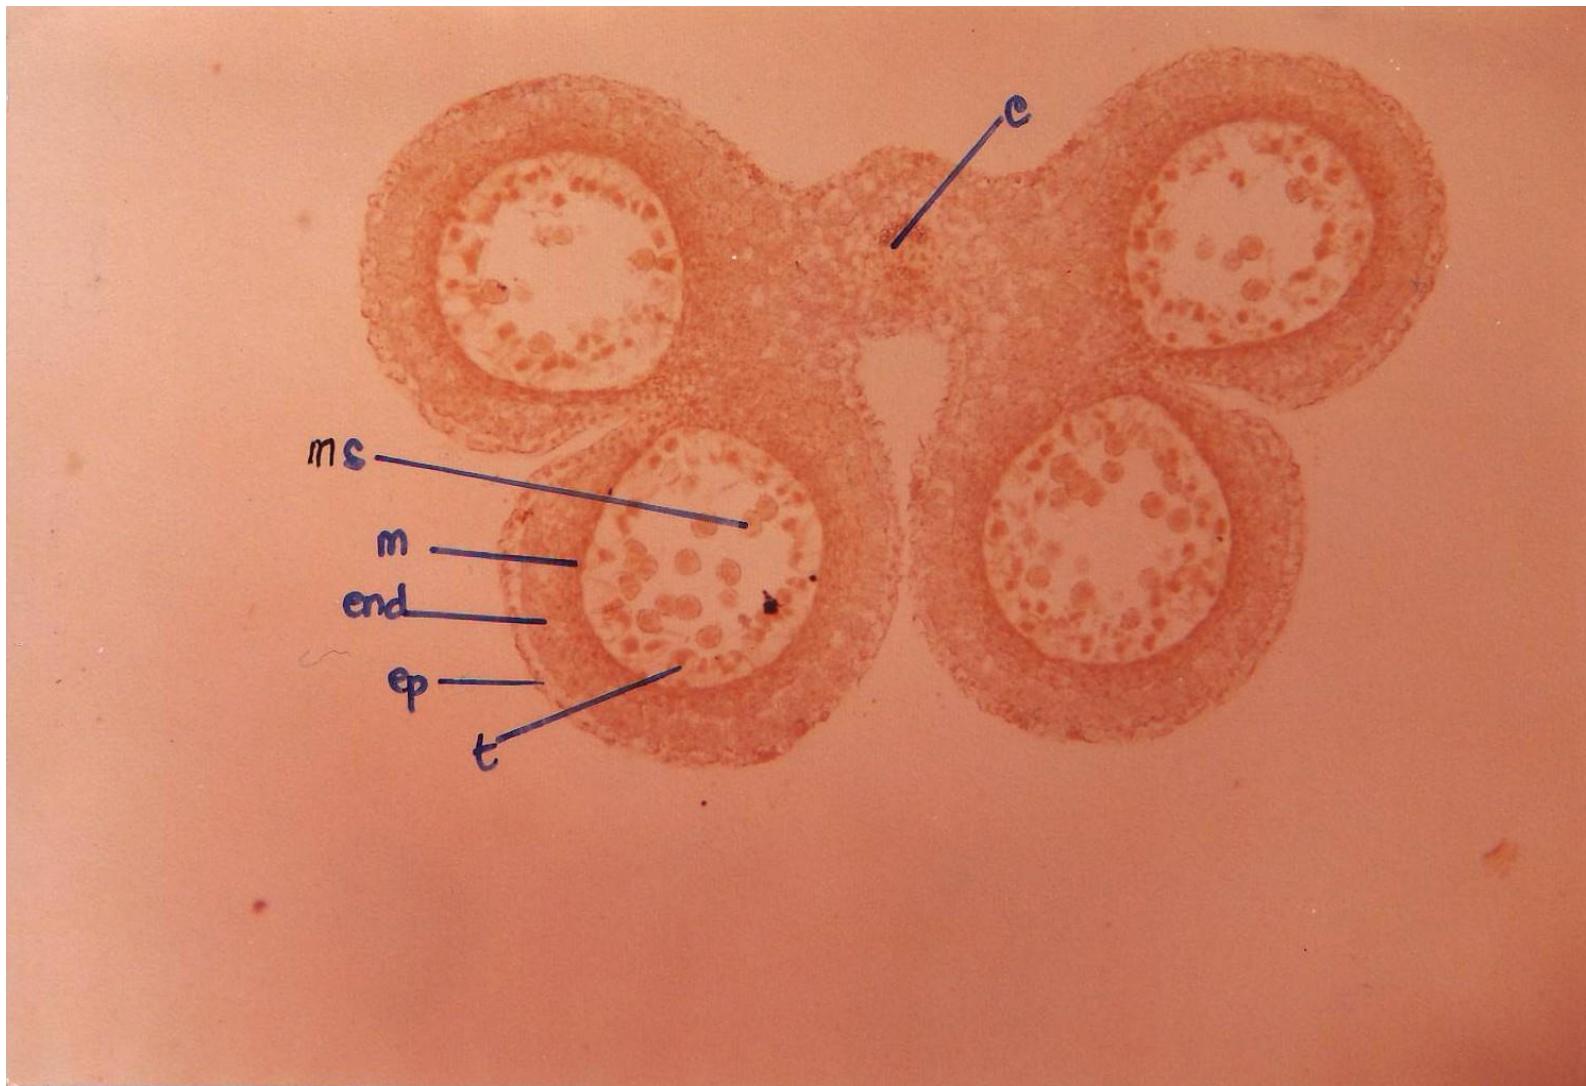

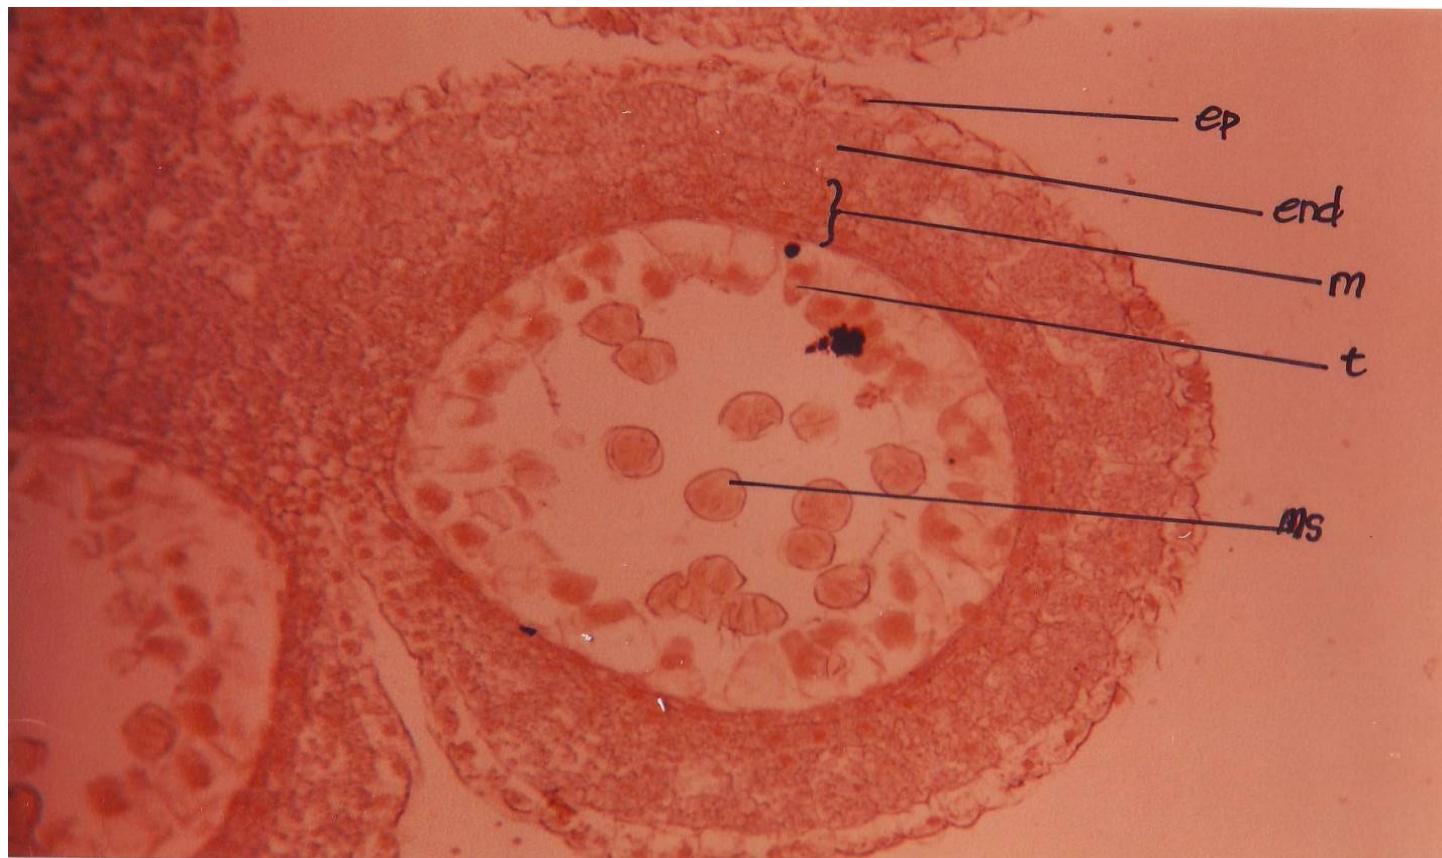

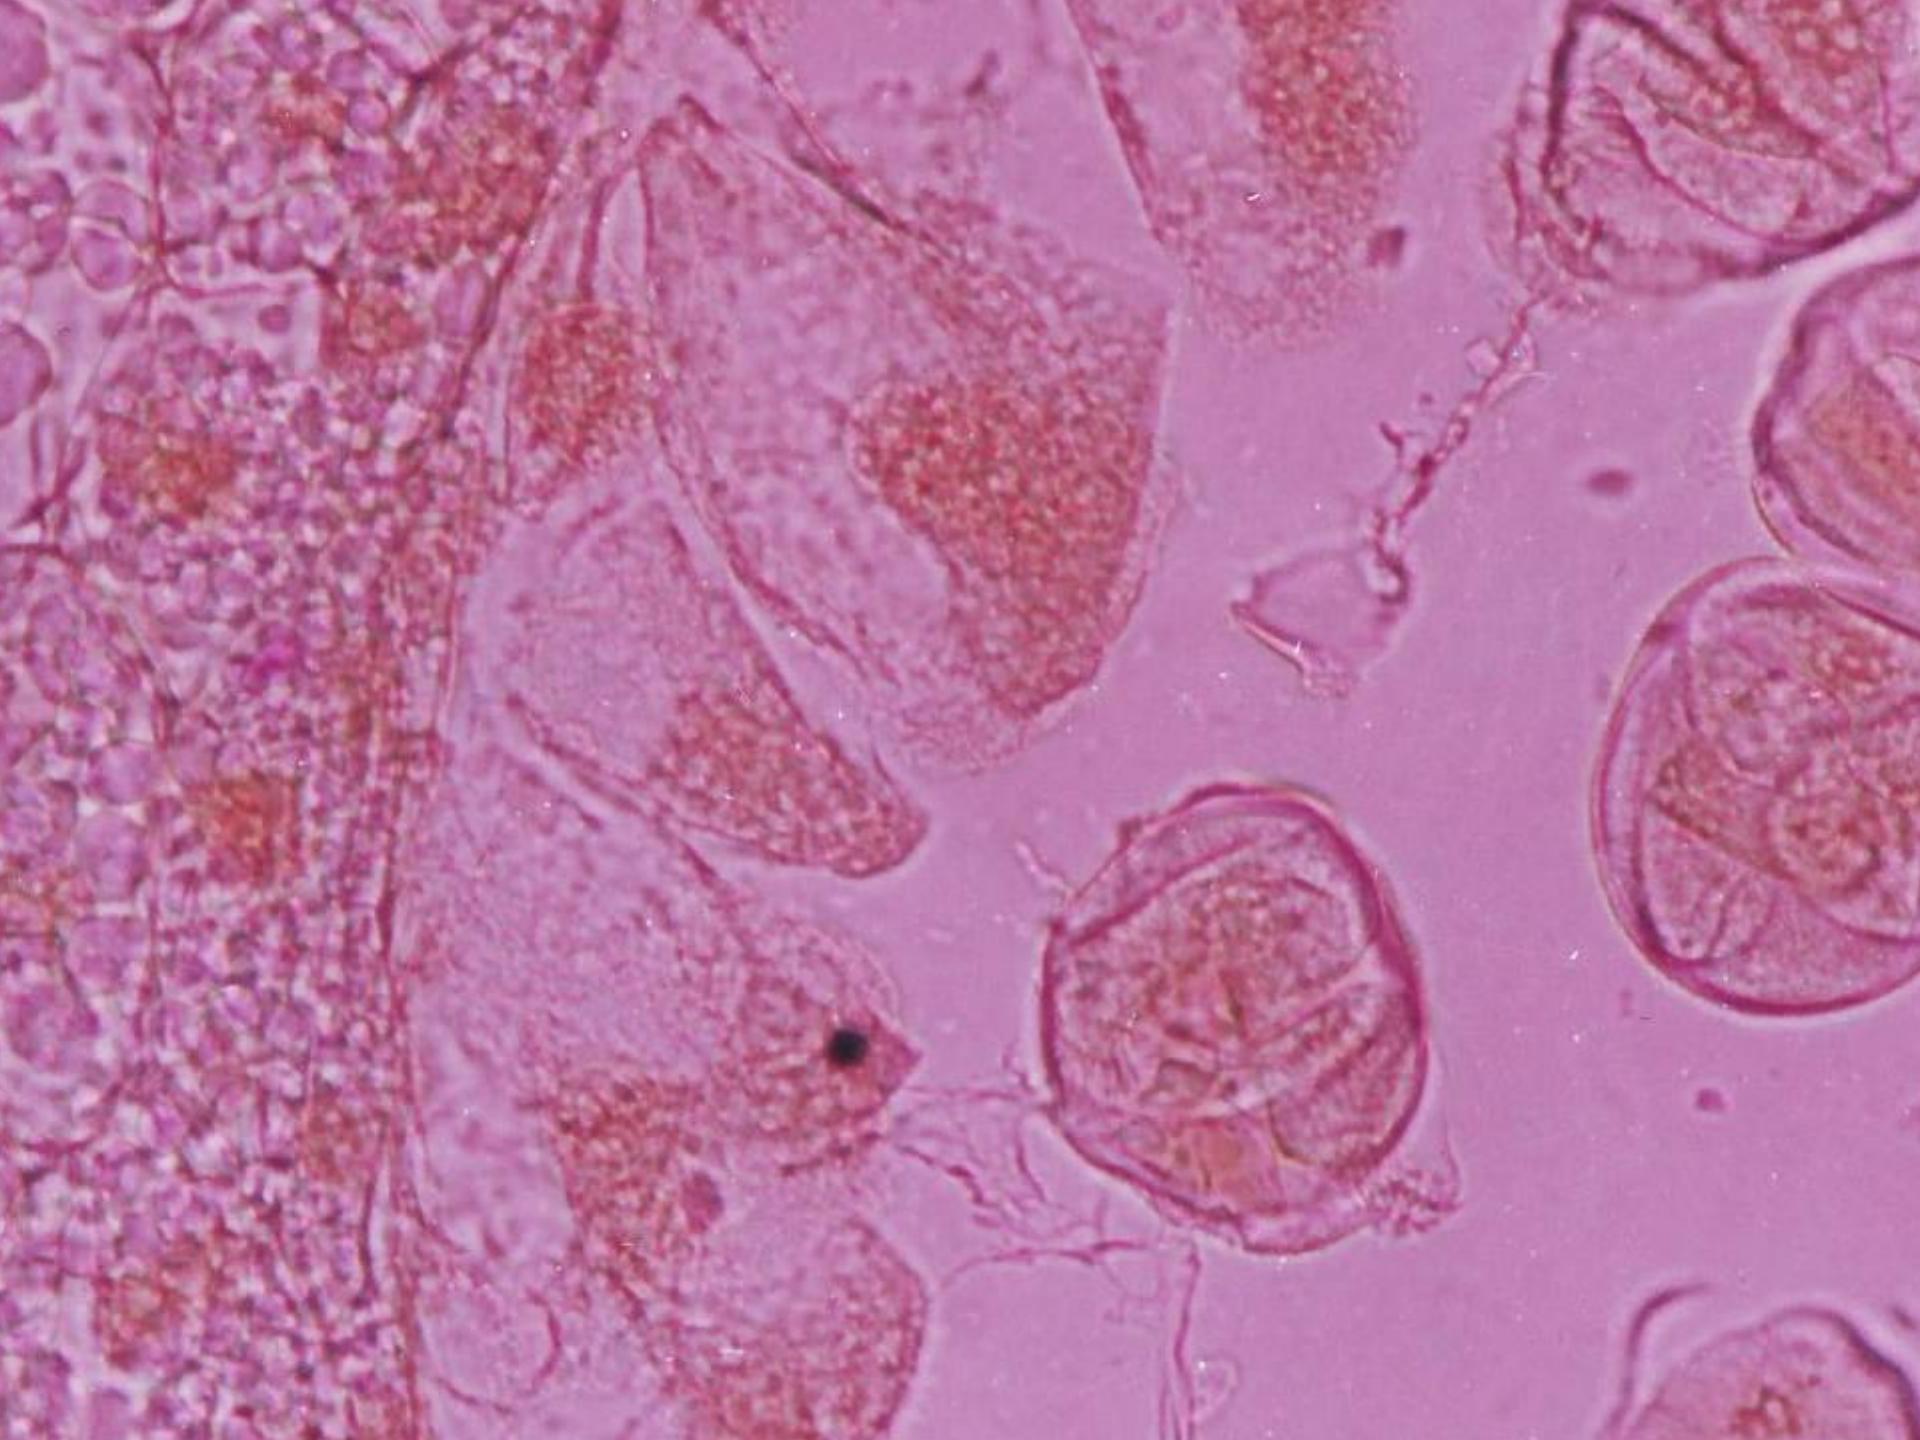

Fig. 4.12. Pollen development in *Cyperus*. **A.** The non-functional microspores have been cut off on one side. The functional spore is large and contains a prominent nucleus. **B.** Two of the non-functional spore nuclei have divided. **C.** The non-functional microspores have degenerated. (after Khanna, 1965)

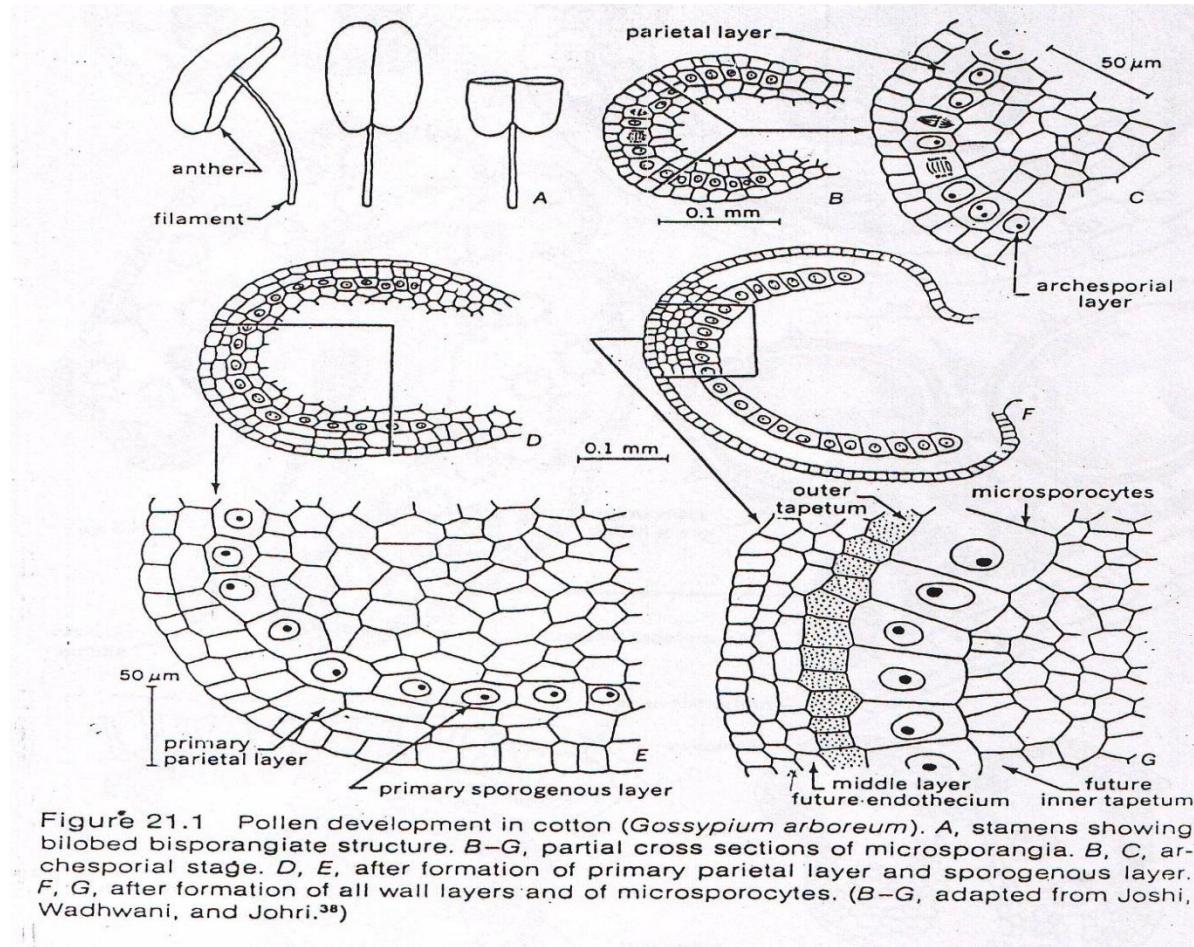

Figure 21.1 Pollen development in cotton (*Gossypium arboreum*). A, stamens showing bilobed bisporangiate structure. B-G, partial cross sections of microsporangia. B, C, archesporial stage. D, E, after formation of primary parietal layer and sporogenous layer. F, G, after formation of all wall layers and of microsporocytes. (B-G, adapted from Joshi, Wadhwani, and Johri.³⁸)

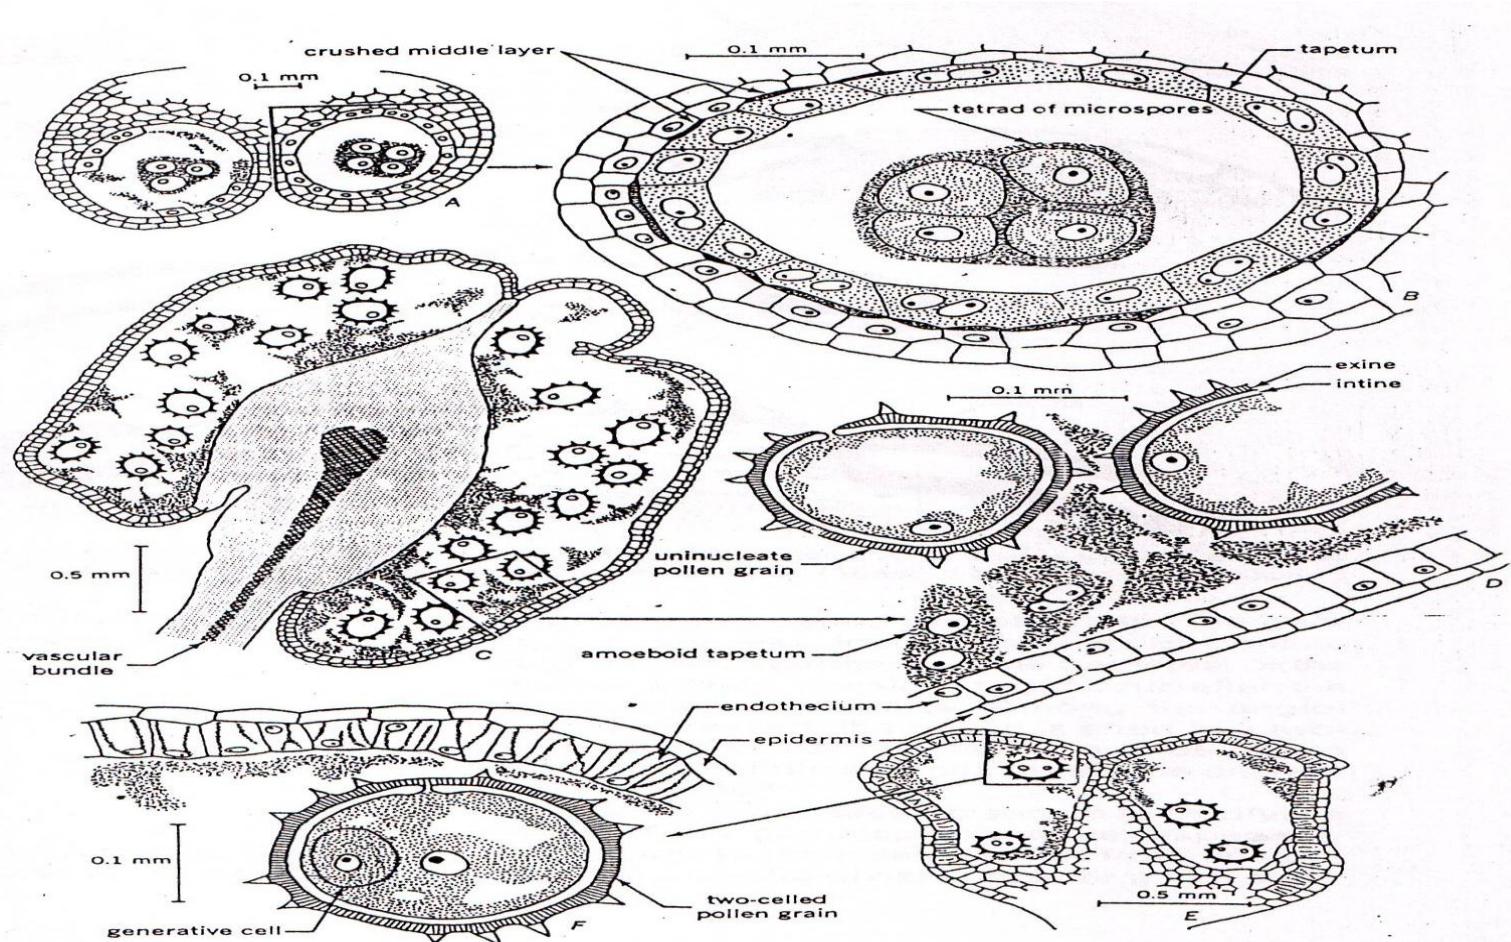

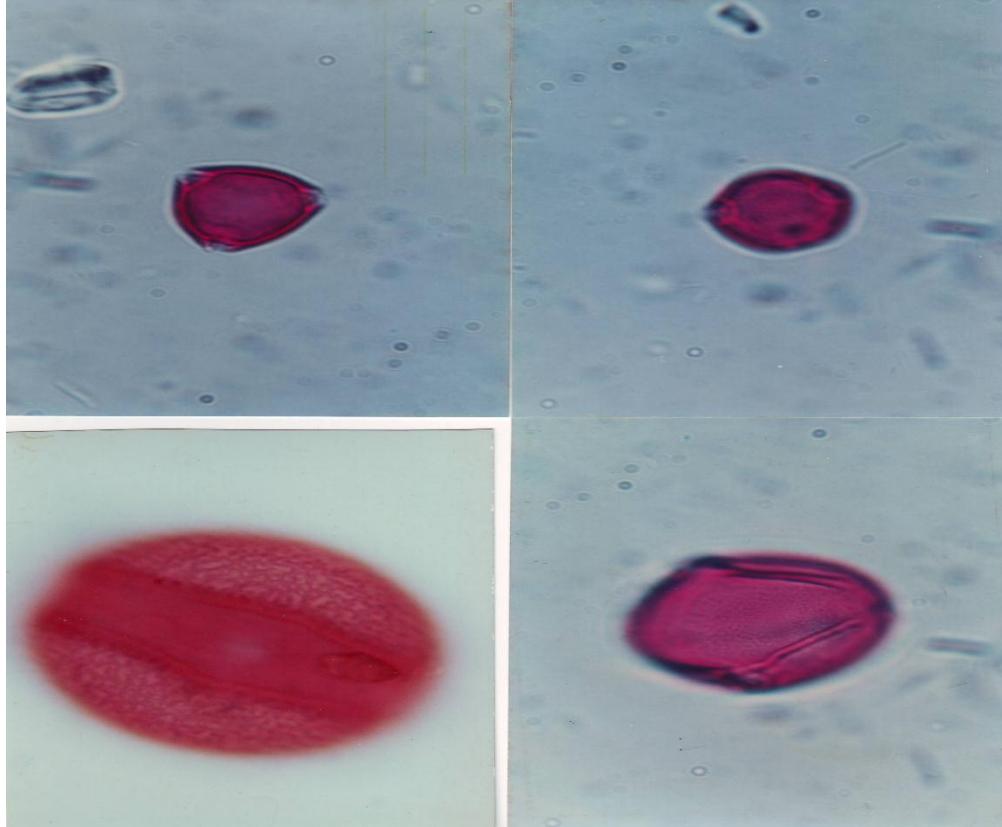

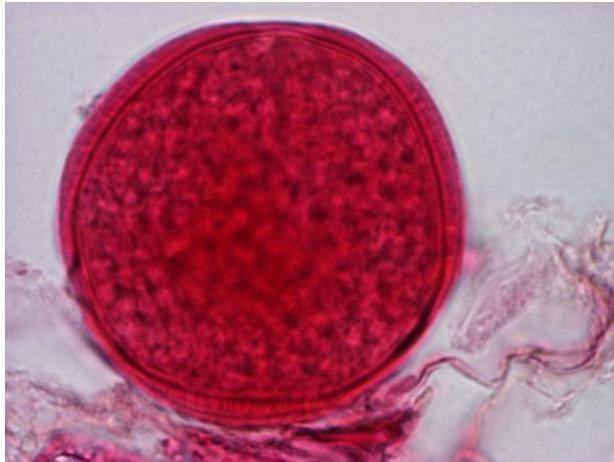

Figure 21.3 Pollen development in cotton (*Gossypium arboreum*). Partial cross (A, B) and oblique longitudinal (C–F) sections of microsporangia. A, B, tetrads in callose wall at beginning of exine formation. C, D, uninucleate pollen grains with exine and intine; tapetum in plasmodial stage. E, F, mature binucleate two-celled pollen grains; tapetum forms a periplasmodium. (Adapted from Joshi, Wadhwani, and Johri.³⁹)

Contoh serbuk sari monad

Contoh serbuk sari monad

- Serbuk sari *Leucaena glauca*

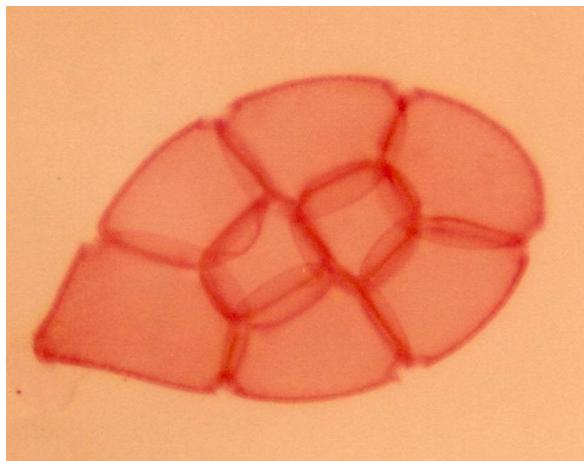

- Serbuk sari *Lilium*

Contoh Serbuk Sari Poliad

- *Samanea saman*
(Mimosaceae)

- *Calliandra* sp. (Mimosaceae)
