Module Description

- The module addresses the issue of the relationship between human beings and its surrounding environments in order to develop such a sense of involvement and responsibility particularly for students in sciences. Man and woman are not created from nothing. Since the beginning, their life has been inextricably linked either to cultural tradition of their ethnic/racial or religious communities, the geographical environments they live in, the government policies that affect them in/directly or the industrial and technological innovations they have growth with. Sufficed to say, they should understand clearly what their own social/political roles are in the complex fabric of the current modern society.
Outcome

• To equip students with a critical thinking and understanding to the changeable social environments either stimulated by natural causes, government policies, technological innovations, cultural adaptations etc.
